

Successive Descriptions

PURPOSE

Let one concrete situation carry the reader from representation to reframing.

WHY IT MATTERS

Inquiry changes when different relations become consequential, before formal language begins.

CLAIM

An episode can remain recognizable while different selections make different questions and actions plausible.

DRAWING

One network appears three times. Acquisition, retention, then promise and capacity become salient; the rest stays visible.

Analogy and Translation

DESCRIPTION A

analogy suggests a correspondence

declared structure must be preserved

DESCRIPTION B

OBLIGATION TO CHECK - NOT A RESULT

PURPOSE

Show the threshold between productive resemblance and an inspectable translation.

WHY IT MATTERS

Analogy directs attention, but trust requires stating what a proposed correspondence must preserve.

CLAIM

Analogy suggests a correspondence. Translation adds preservation obligations that can be tested and can fail.

DRAWING

Two structured descriptions face each other. The hollow gate marks an obligation to check, never a successful preservation.

Earned Formalization

ORDINARY DISTINCTIONS

TYPED RELATIONS

COMPOSITIONAL LAWS

new obligations justify the next gate

PURPOSE

Show how a domain language can acquire structure without following a compulsory ladder.

WHY IT MATTERS

Formal structure matters only when it preserves a consequential distinction or constrains a real relation.

CLAIM

Vocabulary may become typed and compositional as obligations arise. Any adequate stage can be a legitimate stopping point.

DRAWING

A path gains gates as obligations appear. Quiet exits show that further formalization remains conditional.

Rupture and Revision

PURPOSE

Distinguish a limitation of the language from an incorrect instance and from its possible repairs.

CLAIM

A new task can expose a distinction the language cannot express. Rupture constrains revision but selects no repair.

WHY IT MATTERS

A useful representation can reach a new boundary without becoming retroactively useless.

DRAWING

A sustained route reaches a hollow interruption. Earlier use remains visible; two candidate revisions leave the break unresolved.

Different Lenses

SYSTEMIC LENS

CATEGORICAL LENS

WHAT DOES THE MAPPING PRESERVE?

descriptions, composed paths, obligation

PURPOSE

Show how modes of investigation reorganize attention around the same episode.

CLAIM

Systemic inquiry foregrounds relations over time; categorical inquiry foregrounds descriptions, composition, mappings, and preservation.

WHY IT MATTERS

A lens changes which relations govern the next question without claiming to exhaust the episode.

DRAWING

One field follows promise, capacity, delay, and return. The other compares descriptions and asks what mappings and composed paths preserve.

Languages across Work

PURPOSE

Show several languages participating unevenly across intention, orchestration, bounded work, and effect.

CLAIM

Languages cross different parts of work with different scope and precision. Their limits and mismatches must remain recoverable.

WHY IT MATTERS

A domain language is not confined to local execution; recoverability is not universal presence.

DRAWING

Language fields cross selected moments. Filled junctions mark translation; open ones mark unresolved mismatch; context remains reachable below.
